

ROBUST NETWORK AND EMAIL PROTECTION

CloudLuxe SECURITY

Protecting your network from external attacks minimises your downtime, increases your network's efficiency and your business' productivity. E-mail SPAM, viruses and network attacks all waste time and are potentially extremely costly. CloudLuxe Security addresses all of these problems from the cloud.

No matter how big or small your company is, your data is valuable. But is it safe enough? GCOMM can help you overcome your online vulnerability.

Security means a lot of different things. To some, it's locking up your servers in a concrete building with 24/7 limited access. Or, it could mean that your servers are guarded by firewalls. The perceptions are different, and so are the levels of security. But, the risks are always out there.

GCOMM thinks that security begins by safeguarding your data with appropriate network security, monitoring and policies. It also means that we're thinking about potential financial losses, your reputation, business continuity and potential compliance issues. That's why we've come up with CloudLuxe Security which protects your network as your company grows.

Suitable for your business if you want to:

1. reduce potential downtime caused by external attacks
2. outsource network security to experts or don't have in-house expertise
3. have enterprise grade technology delivered as a service
4. want to have detailed logging and reports of user network activity

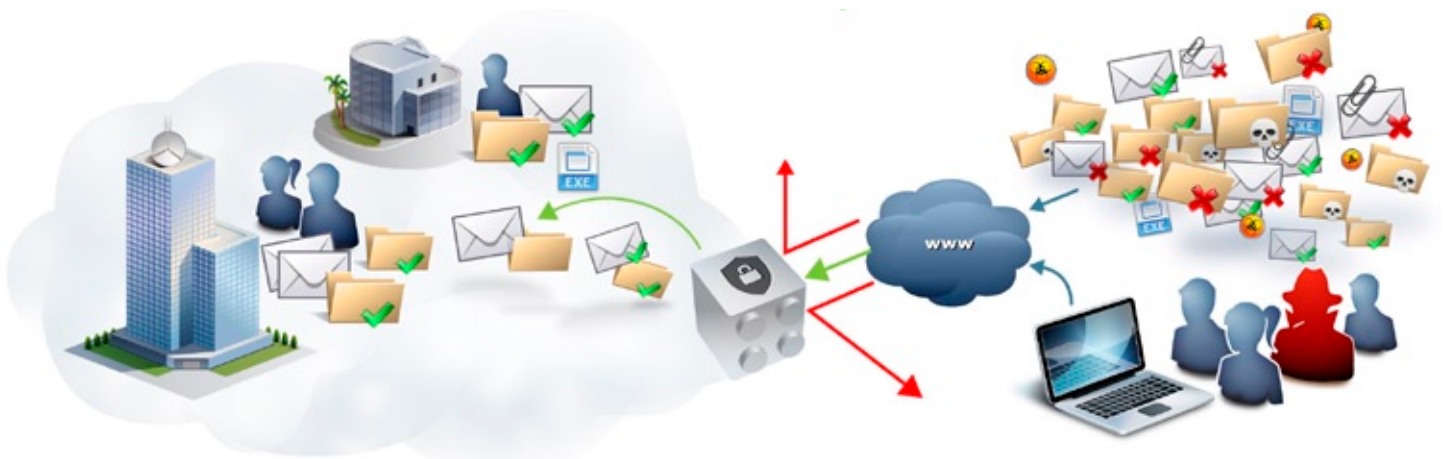

We focus on security, so you can focus on business.

Protecting your network from external attacks minimises your downtime, increases your network's efficiency and your business' productivity. E-mail SPAM, viruses and network attacks all waste time and can be extremely costly. CloudLuxe Security addresses all of these problems from the cloud.

CloudLuxe Security reduces your management and support costs, as well as eliminates hardware expenditure by provisioning the services from the Cloud.

Security solutions that fit your business' security needs

Some businesses want a comprehensive, completely managed, multilayered security implementation across their entire business. Others prefer to manage security with in-house resources armed with effective tools for their existing network. Either way, GCOMM can help. We assess and then tailor our services to meet your specific needs, whether that's providing end-to-end services or giving your IT team the best tools.

Our security services help your company meet your industry's regulatory compliance.

Secure Remote Access.

Your employees can securely access the resources they need, while your business is protected from unauthorized access and Internet threats.

Solid Reputation.

Our security services help you guard one of your company's most important assets – your reputation.

Service specifics

FIREWALL

CloudLuxe Security provides firewalling as a service, no hardware purchase required. We have the engineering skills needed to manage the solution for you. The configuration, maintenance and performance of the firewall is provided as part of the service.

E-MAIL PROTECTION

CloudLuxe Security email filtering service filters your company's email, checking it for SPAM illegitimate or infected content and preventing it from being delivered. The solution is highly accurate, redundant and will increase the productivity in your business all from the Cloud.

ANTI-VIRUS

CloudLuxe Security anti-virus protection is designed to provide an effective shield from viruses, worms and other malicious programs that could jeopardise your business' critical data. The service includes automatic updates to the latest virus definitions, giving you peace of mind, allowing you to run your business – without worrying about security threats.

Features

- Filtering of all traffic entering and leaving your network for malicious activity
- Content filtering policies for restricting access to unwanted sites
- Supports remote VPN connections

- E-mail filtering for SPAM and Viruses
- Reputation-based filtering for highly accurate results
- Less than 1 in 1 million false positives
- Enterprise-grade protection
- Powered by Cisco IronPort

- Protects your entire network including servers and desktops
- Simple management interface
- Real time virus definition updates are maintained
